

## HOW DOES PICO LASER TATTOO REMOVAL WORK?

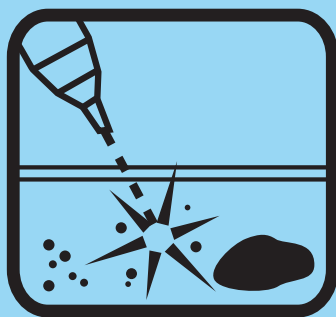

1

Before the procedure, our skilled technicians apply Rx-strength anesthesia and precision-relief skin-chillers on and around your tattoo area to reduce discomfort.

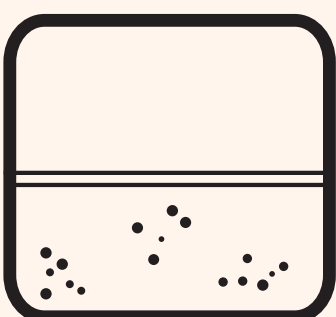

2

During the treatment the Pico Lasers deliver precise, high-power energy bursts in extremely short pulses – shattering ink particles with great impact, but without harmful heat.

3

After treatment, since the shattered ink particles are now microscopic in size, the body can naturally eliminate the unwanted ink from the area.

Amazingly effective tattoo removal.
